

# Teacher Presentation Station (TPS) Mounting Covozon Power Strip in Legrand Access Box w/ 3M Dual Lock

Important - Install the 3M 1" Dual Lock strips on a work table BEFORE installing the Legrand Box in the Teacher Presentation Station (TPS).

Full Roll Length: 3.9 Ft

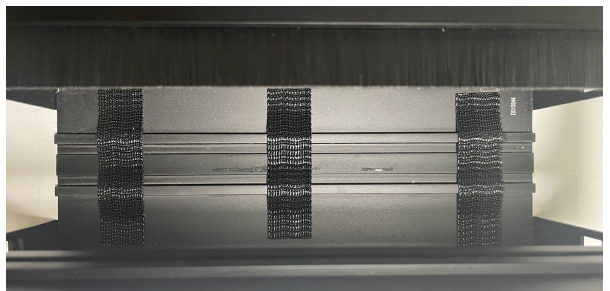

1 Legrand Box Bottom -  
Mark 3/4" in from each edge with a Sharpie.

2 Legrand Box Bottom -  
Cut, evenly space, and mount three 3 1/2" 3M Dual Lock adhesive strips in bottom of the Legrand box.

1st press firmly in the middle groove section to closely seal the adhesive strip over the rail edges on the bottom of the Legrand.

Next, press dual lock over the edges of the rail, and then press the ends of the strip down. Repeat this pressing process for a couple of minutes to make sure the adhesive tape really sticks to the metal box and rails.

3 Backside of Covozon Power Strip -  
Cut two 2 1/2" strips for the ends, and one smaller strip for the middle. Try NOT to completely cover up the "water" pass through holes on the bottom. It's very important that the dual lock has left, middle, and right contact points as that will completely lock the power strip to the bottom of the box so that it doesn't move.

4 Turn over the Covozon Powerstrip and holding both edges of the power strip, position and push exactly in the middle of the Legrand box. If it feels wobbly, you'll have to pull it off and try again to better line up the Power strip with the bottom groove rails.

Note - You can place the power strip with 20ft. cord facing either right or left out of the box and towards the nearest wall.
