QuickShip

Agile furniture solutions by VS

All inventory ships from the U.S. in ***10 business days*** or ***less***.

VS America

VS America, Inc. provides adaptable and ergonomic educational furniture solutions for the creation of agile learning environments.

At VS, we believe successful learning should balance the needs of the body, mind, and soul. We always encourage movement and natural curiosity. From our fully-adjustable chairs to modular tables that encourage collaboration, we believe that learning is an active process. When students engage their senses while learning, the long-term benefits include a heightened focus, stronger motivation, and a sense of well-being.

Our ergonomic furniture inspires motion, and has the flexibility to adapt to every changing learning environment need – giving educators the freedom to easily create spaces for every type of learning style.

For more information, please visit www.vsamerica.com.

QuickShip Program

When a project requires a short turnaround time, the QuickShip Program will help get products to you faster – **in-stock products will ship in 10 business days or less.**

The specific products showcased in this brochure are all included in the QuickShip Program. QuickShip is based on a first-come, first-served basis, and items may not be reserved for longer than 10 business days. Please confirm available quantities before placing an order.

For VS America's freight policy, please contact your Territory Manager or email info@vsamerica.com.

Getting products to customers faster.

Seating *opens up* the conversation.

When you specify chairs, they should enable a high degree of freedom in your learning space. Easily adjustable to individual body heights. And flexible enough to respond to free flowing body movements.

It's key to understand that students at any age are not able to sit still for long periods of time. Having the ability to sit, stand, and move around is always optimal for healthy, growing, and often fidgety bodies. That's why chairs should not be used for long-term sitting and should feature agile, three-dimensional sitting, enabling micro and macro movements.

Multi-dimensional seat mobility promotes the right kinds of complex interactions between legs, pelvis, spine, shoulders, and head. In particular, "unlocking" of the pelvis is very important. The biomechanical analysis of the body shows pelvic movement activates the entire muscular and skeletal systems, benefiting the body in myriad ways.

FIGURE FROM: LUDWIG AND BREITHECKER 2008

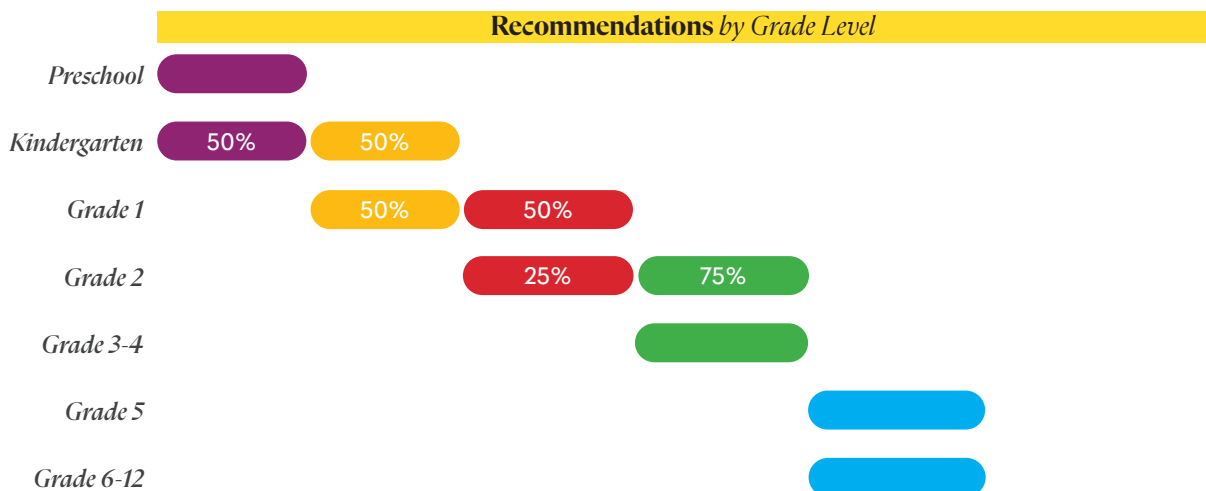

On the top right quadrant, you'll see a significant increase of oxygen supply while seated on a chair with 3D function. Compare this image to the left-hand side, which shows how sitting in a rigid chair leads to deficient circulation.

Seating

Seating *Size Guide*

	2	3	4	5	6	7
	3'6" - 4'	3'9" - 4'7"	4'4" - 5'2"	4'9" - 5'9"	5'2" - 6'2"	5'8" - 6'9"
Shell Size	S		M		L	XL
Seat Height	12.25	13.75	15	17	18.125	20.125
Table Height	20.875	23.25	25.25	28	30	32.375
Standing Table Height			34.625		41.75	47.25

Seating Chart Recommendation:

One size **does not** fit all—customizing seating enhances collaboration and productivity

(All sizes listed are in inches)

Choosing *the right sizes for you.*

VS' tables and chairs are ergonomically designed. Their outstanding ergonomic properties are confirmed by the quality label awarded by the Healthy Back Campaign (Aktion Gesunder Rücken e.V.).

Correct sitting and ergonomic working can only be achieved when the student's chair is regularly adapted to suit their height. In the DIN EN 1729 standard, body height and seat/table height have been correlated and six table and seat sizes have been determined. The decisive factor is the regular checking of the size and individual selection because the height of students in one class depends on their individual development and can vary considerably. In other words, each student needs a chair and table which suits his or her height.

Children vary in size. This is why they often sit at furniture combinations that are not suited for them. Appropriately sized furniture is essential for optimum concentration levels and growth. Without correctly sized furniture, students could suffer from posture damage, and head and back pain.

The six chair sizes can be easily recognized by their colored dots. They range from a seat height of 12.25 inches in size 2 up to a seat height of 20.125 inches in size 7. The corresponding sit at table heights range from 20.875 inches to 32.375 inches. This range provides students, whether they are 3 foot 6 inches or 6 foot 9 inches tall, with the correct sitting and working conditions.

PantoSwing-LuPo

Forward-flexing cantilever chair

The PantoSwing's dynamic seat encourages regular changes in sitting positions, which has been shown to activate both the body and mind, and to increase the attention of students. With a frame made of bent, powder-coated steel tubing and a seat shell made of double-walled textured polypropylene, this chair takes durability to a new level.

PantoMove-LuPo

Ergonomic, height-adjustable chair

The PantoMove chair is height-adjustable, making it easy to quickly adjust the seat to individual requirements. The patented 3D rocking mechanism offers even greater dynamic sitting by allowing the seat area to react to every change of weight and leans gently forward, backward, or sideways. The PantoMove is a great mobile solution for any agile space.

Creative options *that raise the bar.*

Whether you're looking for modern student desks or agile tables to maximize productivity and focus, or to facilitate collaboration and creative thinking, our collection has the solution. From height-adjustable and freeform tables in various sizes, all of our tables capture the design and execution of the ideal, productive learning environment.

Lightweight, easily height-adjustable tables promote physiologically positive sitting postures. They can be raised as students grow and therefore don't need replacing over the school year. Individual tables on casters in different shapes can be combined with one another in many different ways and offer individual, rapid changes in forms of learning.

Tables that allow for standing

Standing tables and group standing tables with foot supports – very important for dynamic standing – are important basic furniture for indoor spaces.

They encourage spontaneous posture changes (sitting/standing/stand-sitting). Accordingly, they should also be used for standing and not for continuous high sitting. High tables are particularly useful during group work. Ideal non-adjustable standing tables accommodate an average body height for the relevant age group, which means around 35 inches for 3rd to 7th graders and around 42 inches for 8th to 12th graders. Adapting the height precisely to individual users or a group for temporary use is not necessary. They're flexible to accommodate a variety of tasks and can be combined for large or small groups. They can also be moved on casters throughout the school.

Continuously adjustable high chairs with a 3D rocking mechanism and an adjustable foot ring are the perfect complement to standing desks. These can be used for intuitive sitting or stand-sitting, and facilitate eye-to-eye level communication. Rigid seats are not healthy choices and shouldn't be specified.

Tables

Shift+ Thumbprint

Mobile, stackable desk

The ThumbPrint is an easy to move, lightweight desk with flexible use positions. The convex- or concave-shaped tabletops ensure the tables can be combined in a variety of ways – into circles, rows, groups, and more. **ThumbPrint tables increase classroom combination possibilities and open up configurations for a truly agile design.** The tables can be stacked up to 6 high.

LiteTable-ST

Stackable lightweight table

The LiteTable-ST offers the ultimate flexibility for multi-use spaces and agile classrooms. It has a frame made from welded steel, providing superior strength and longevity. Four heights are available through the QuickShip Program so each student can find their perfect fit. This table is stackable up to 8 high and due to its paired inset and outset legs, can be alternated to allow for continuous rows without gaps between desks.

FlipTable-RU

Table with folding top

Roll it around. Link them together. Flip it down.

Nest it away. The FlipTable-RU has exceptional flexibility, functionality, and durability for classrooms to meeting rooms and everything in between. A two-lever safety mechanism ensures the table is never flipped by accident, and the top locks when horizontal or flipped for added safety.

Shift+ FusionFlip

Freeform table with folding top

This easily combined freeform table can be used for the most diverse group sizes. The tables can be pushed together as needed to create spaces for larger groups. The foldable top allows the tables to be nested together to save space when not in use. Four casters provide for problem-free mobility and the tables are light enough to be moved by students of all ages. The FusionFlip has curves that fit all other Shift+ product curves, so it can nest with other desks and tables in an unlimited set of configurations.

RondoLift

Height-adjustable sit-at and stand-at table

The RondoLift table raises the bar for teachers and students. The fully-adjustable tabletop gives it sit-at or stand-at functionality. Lockable casters make it mobile. And, round or square tabletop models are available with an optional tilt mechanism, allowing them to be stowed in a snap or converted to a projection or display surface. Quick, creative options that help take education up a notch.

Truth is schools need a better way to **organize, store, and access their stuff.**

Modular storage solutions

The right storage solution should **elegantly organize, unify, and complement any space.**

Our modular systems are comprised of storage units crafted to provide personalization and versatility. Each design in our collection lends itself to a range of configurations, allowing you to meet the needs of your space. Whether you need a building-wide storage system, some comprehensive classroom or multi-purpose space storage, our solutions allow for a seamless transition while maximizing use of space.

Storage

Shift+ Transfer

Mobile shelving elements & teacher's cabinet

The Transfer mobile shelving elements are available through the QuickShip Program in two shapes – 60° curved and straight. They can be formed into various combinations, as well as used with the Shift+ Landscape seating elements to create separate seating areas. The Shift+ Transfer Teach (teacher's cabinet) equips the teacher with a mobile storage space with a lockable door, and two of the four casters are lockable. As a freely mobile element, it can accompany the teacher anywhere in the room or building.

All Transfer units have bases made from welded steel, providing superior strength and longevity. Stocked elements also include handles and connecting magnets on each side for easy transportation, reconfiguration, and linking.

SpaceWalk

Mobile storage elements

SPACE is the all-school storage system that stores much more than standard casework and is a smarter way to organize, see, and share resources.

SpaceWalk carts roll the lesson right to desktops, floor mats, and study nooks. It's a fluid, modular system that goes where you need it, when you need it.

SpaceWalk rails fit different sizes of standard and custom Certwood bins. Storage elements for the 12 inch bin width can fit any combination of the four standard bin heights (single/3 inch, double/6 inch, triple/9 inch, and quad/12 inch) interchangeably. Storage elements for the custom 9 inch bin width can fit the VS exclusive bookbin (6 inch height) which is perfect for books, maker materials, and more. A storage element can also have vertical rows for the 12 inch bin width and vertical rows for the 9 inch bin width in one unit.

Agile Spaces

Creating truly agile learning environments is a vital consideration for modern learning cultures within schools, especially since children can only develop in a healthy and performance-effective way if they get enough physical activity.

This is why schools today are schools in motion: comfortably alternating between sitting and standing when working, dynamic rather than rigid sitting postures, with movement integrated into learning in a variety of ways to keep attention and concentration levels up. Dynamic and ergonomic student furniture makes a fundamental contribution here. Agile furniture can be easily reconfigured to fit an endless variety of educational styles, and can be utilized in classrooms, collaborative spaces, and media centers from K-12 through higher education.

By seamlessly integrating ergonomics, adaptable furniture, layout, and room function, VS products allow learning environments to be highly flexible, yet remain structured and coordinated. This is an important interaction to promote well-being and bolster academic success for students of all ages.

See the following pages for a few sample layouts.

“Watching a child makes it
obvious that **development
of body and mind**
comes through movement.”

– *Maria Montessori*

Sustainability

Over a century of sustainability and craft.

For over 125 years, VS has been providing outstanding educational furniture that brings visionary design concepts into the places we learn, work, and play. Although much has changed in the industry over the decades, our fundamentals stay the same. Our long-standing commitment to sustainability and quality craftsmanship remains our mission at VS.

As a company, we have always considered it our responsibility to commit to measures that benefit people, while protecting the natural environment. We offer our customers safe, healthy, long-life products, all manufactured in a way that contributes to environmental protection.

Product certifications include:

Cradle to Cradle

GREENGUARD

BIFMA Level 3

VS headquarters, designed by Behnisch Architekten, utilizes high-performance building and design strategies.

We deliberately control our energy consumption by keeping well below the permitted limit values in our new building projects, continuously improving our energy performance. Our gas-fired cogeneration plant covers 36 percent of our electricity consumption and also provides us with additional heating energy.
